ARG22333 anti-IL2 Receptor beta antibody [5H4] (FITC)

Package: 100 μg Store at: 4°C

Summary

Product Description FITC-conjugated Rat Monoclonal antibody [5H4] recognizes IL2 Receptor beta

Tested Reactivity Ms
Tested Application FACS

Specificity Mouse CD122

Host Rat

Clonality Monoclonal

Clone 5H4

Isotype IgG2a, kappa

Target Name IL2 Receptor beta

Species Mouse

Immunogen Rat myeloma YB2/0 transfected with truncated IL-2Rβ cDNA (YB2/0-mβt-28)

Conjugation FITC

Alternate Names P70-75; IL-2RB; IL-2 receptor subunit beta; p75; Interleukin-2 receptor subunit beta; CD122; CD antigen

CD122; High affinity IL-2 receptor subunit beta; IL-2R subunit beta; p70-75; IL15RB

Application Instructions

Application table	Application	Dilution
	FACS	< 1 ug/10^6 cells
Application Note	* The dilutions indicate recommended starting dilutions and the optimal dilutions or concentrations should be determined by the scientist.	

Properties

Form Liquid

Buffer PBS and 0.1% Sodium azide.

Preservative 0.1% Sodium azide

Concentration 0.5 mg/ml

Storage instruction Aliquot and store in the dark at 2-8°C. Keep protected from prolonged exposure to light. Avoid

repeated freeze/thaw cycles. Suggest spin the vial prior to opening. The antibody solution should be

gently mixed before use.

Note For laboratory research only, not for drug, diagnostic or other use.

Bioinformation

Database links GeneID: 16185 Mouse

Swiss-port # P16297 Mouse

Gene Symbol IL2RB

Gene Full Name interleukin 2 receptor, beta chain

Background The interleukin 2 receptor, which is involved in T cell-mediated immune responses, is present in 3 forms

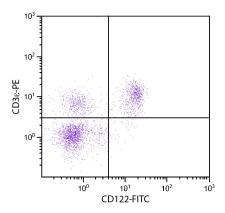

with respect to ability to bind interleukin 2. The low affinity form is a monomer of the alpha subunit and is not involved in signal transduction. The intermediate affinity form consists of an alpha/beta subunit heterodimer, while the high affinity form consists of an alpha/beta/gamma subunit heterotrimer. Both the intermediate and high affinity forms of the receptor are involved in receptor-mediated endocytosis and transduction of mitogenic signals from interleukin 2. The protein encoded by this gene represents the beta subunit and is a type I membrane protein. [provided by RefSeq, Jul 2008]

Function Receptor for interleukin-2. This beta subunit is involved in receptor mediated endocytosis and

transduces the mitogenic signals of IL2. [UniProt]

Calculated Mw 61 kDa
