ARG23127 anti-CD312 / EMR2 antibody [2A1] (PE)

Package: 50 tests Store at: 4°C

Summary

Product Description PE-conjugated Mouse Monoclonal antibody [2A1] recognizes CD312 / EMR2

Mouse anti Human CD312 antibody, clone 2A1 recognizes human EMR2, a member of the epidermal growth factor-seven transmembrane (EGF-TM7) family of proteins, which is closely related to CD97. EMR2, also known as CD312, is predominantly expressed on myeloid dendritic cells, monocytes and tissue macrophages. Various isoforms of EMR2 have been documented. The ligand for the largest isoform of EMR2 has recently been identified as chrondroitin sulphate, which binds to the fourth EGF-

like module of EMR2. Clone 2A1 specifically recognizes the stalk region of EMR2.

Tested Reactivity Hu

Tested Application FACS

Host Mouse

Clonality Monoclonal

Clone 2A1

Isotype IgG1

Target Name CD312 / EMR2

Species Human

Immunogen NIH-3T3 cells stably transfected with EMR2 (EGF1-5) cDNA.

Conjugation PE

Alternate Names CD antigen CD312; EGF-like module-containing mucin-like hormone receptor-like 2; EMR2; CD312;

Adhesion G protein-coupled receptor E2; EGF-like module receptor 2

Application Instructions

Application table	Application	Dilution
	FACS	Neat

Application Note FACS: Use 10 μ l of the suggested working dilution to label 10^6 cells in 100 μ l.

* The dilutions indicate recommended starting dilutions and the optimal dilutions or concentrations

should be determined by the scientist.

Properties

Form Liquid

Purification Purification with Protein A.

Buffer PBS, 0.09% Sodium azide, 1% BSA and 5% Sucrose.

Preservative 0.09% Sodium azide

Stabilizer 1% BSA and 5% Sucrose

Storage instruction Aliquot and store in the dark at 2-8°C. Keep protected from prolonged exposure to light. Avoid

repeated freeze/thaw cycles. Suggest spin the vial prior to opening. The antibody solution should be

For laboratory research only, not for drug, diagnostic or other use.

Bioinformation

Gene Symbol ADGRE2

Gene Full Name adhesion G protein-coupled receptor E2

Background This gene encodes a member of the class B seven-span transmembrane (TM7) subfamily of G-protein

coupled receptors. These proteins are characterized by an extended extracellular region with a variable number of N-terminal epidermal growth factor-like domains coupled to a TM7 domain via a mucin-like spacer domain. The encoded protein is expressed mainly in myeloid cells where it promotes cell-cell adhesion through interaction with chondroitin sulfate chains. This gene is situated in a cluster of related genes on chromosome 19. Alternatively spliced transcript variants encoding multiple isoforms have

been observed for this gene. [provided by RefSeq, Aug 2012]

Function Cell surface receptor that binds to the chondroitin sulfate moiety of glycosaminoglycan chains and

promotes cell attachment. Promotes granulocyte chemotaxis, degranulation and adhesion. In macrophages, promotes the release of inflammatory cytokines, including IL8 and TNF. Signals probably

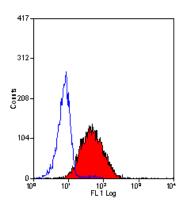

through G-proteins. [UniProt]

Calculated Mw 90 kDa

PTM Autoproteolytically cleaved into 2 subunits, an extracellular alpha subunit and a seven-transmembrane

beta subunit. [UniProt]
