ARG24103 anti-Insulin antibody [E2E3]

Package: 100 μg Store at: -20°C

Summary

Product Description Mouse Monoclonal antibody [E2E3] recognizes Insulin

Tested Reactivity Hu, Bov, Pig, Rb

Tested Application ELISA, IHC-Fr, IHC-P

Host Mouse

Clonality Monoclonal

Clone E2E3

Isotype IgG1

Target Name Insulin
Species Human

Immunogen Human Insulin conjugated to BSA.

Conjugation Un-conjugated

Alternate Names IDDM; IDDM2; IDDM1; ILPR; MODY10; Insulin; IRDN

Application Instructions

Application Note

Antibody reactivity and working conditions may vary between species.

* The dilutions indicate recommended starting dilutions and the optimal dilutions or concentrations should be determined by the scientist.

Properties

Form Liquid

Purification Affinity chromatography on Protein G from tissue culture supernatant.

Buffer PBS, 0.1%BSA and < 0.1% Sodium azide

Preservative < 0.1% Sodium azide

Stabilizer p.1% BSA

Concentration 1 mg/ml

Storage instruction For continuous use, store undiluted antibody at 2-8°C for up to a week. For long-term storage, aliquot

and store at -20°C or below. Storage in frost free freezers is not recommended. Avoid repeated freeze/thaw cycles. Suggest spin the vial prior to opening. The antibody solution should be gently mixed

before use.

Note For laboratory research only, not for drug, diagnostic or other use.

Bioinformation

Gene Symbol INS

Gene Full Name insulin

Background After removal of the precursor signal peptide, proinsulin is post-translationally cleaved into three

peptides: the B chain and A chain peptides, which are covalently linked via two disulfide bonds to form insulin, and C-peptide. Binding of insulin to the insulin receptor (INSR) stimulates glucose uptake. A multitude of mutant alleles with phenotypic effects have been identified. There is a read-through gene, INS-IGF2, which overlaps with this gene at the 5' region and with the IGF2 gene at the 3' region.

Alternative splicing results in multiple transcript variants. [provided by RefSeq, Jun 2010]

Function Insulin decreases blood glucose concentration. It increases cell permeability to monosaccharides, amino

acids and fatty acids. It accelerates glycolysis, the pentose phosphate cycle, and glycogen synthesis in

liver. [UniProt]

Research Area Cell Biology and Cellular Response antibody; Metabolism antibody; Neuroscience antibody; Signaling

Transduction antibody

Calculated Mw 12 kDa

PTM Cleavage on pair of basic residues; Disulfide bond

Cellular Localization Secreted
