ARG40563 anti-ABCG2 antibody

Package: 50 μg Store at: -20°C

Summary

Product Description Rabbit Polyclonal antibody recognizes ABCG2

Tested Reactivity Ms, Rat
Tested Application WB

Host Rabbit

Clonality Polyclonal

Isotype IgG

Target Name ABCG2
Species Mouse

Immunogen Synthetic peptide corresponding to aa. 152-167 of Mouse ABCG2. (KNHEKNERINTIIKEL)

Conjugation Un-conjugated

Alternate Names BCRP1; Urate exporter; BCRP; MRX; Placenta-specific ATP-binding cassette transporter; EST157481;

GOUT1; MXR; Mitoxantrone resistance-associated protein; CDw338; CD338; ATP-binding cassette subfamily G member 2; ABC15; ABCP; UAQTL1; Breast cancer resistance protein; MXR1; MXR-1; BMDP; CD

antigen CD338

Application Instructions

Application table	Application	Dilution
	WB	0.1 - 0.5 μg/ml
Application Note	* The dilutions indicate recommended starting dilutions and the optimal dilutions or concentrations should be determined by the scientist.	

Properties

Form Liquid

Purification Affinity purification with immunogen.

Buffer 0.2% Na2HPO4, 0.9% NaCl, 0.05% Thimerosal, 0.05% Sodium azide and 5% BSA.

Preservative 0.05% Thimerosal and 0.05% Sodium azide

Stabilizer 5% BSA

Concentration 0.5 mg/ml

Storage instruction For continuous use, store undiluted antibody at 2-8°C for up to a week. For long-term storage, aliquot

and store at -20°C or below. Storage in frost free freezers is not recommended. Avoid repeated freeze/thaw cycles. Suggest spin the vial prior to opening. The antibody solution should be gently mixed

before use.

Note For laboratory research only, not for drug, diagnostic or other use.

Bioinformation

Gene Symbol ABCG2

Gene Full Name ATP-binding cassette, sub-family G (WHITE), member 2 (Junior blood group)

Background The membrane-associated protein encoded by this gene is included in the superfamily of ATP-binding

> cassette (ABC) transporters. ABC proteins transport various molecules across extra- and intra-cellular membranes. ABC genes are divided into seven distinct subfamilies (ABC1, MDR/TAP, MRP, ALD, OABP, GCN20, White). This protein is a member of the White subfamily. Alternatively referred to as a breast cancer resistance protein, this protein functions as a xenobiotic transporter which may play a major role in multi-drug resistance. It likely serves as a cellular defense mechanism in response to mitoxantrone and anthracycline exposure. Significant expression of this protein has been observed in

> the placenta, which may suggest a potential role for this molecule in placenta tissue. Multiple transcript

variants encoding different isoforms have been found for this gene. [provided by RefSeq, Apr 2012]

Function High-capacity urate exporter functioning in both renal and extrarenal urate excretion. Plays a role in

porphyrin homeostasis as it is able to mediates the export of protoporhyrin IX (PPIX) both from mitochondria to cytosol and from cytosol to extracellular space, and cellular export of hemin, and heme. Xenobiotic transporter that may play an important role in the exclusion of xenobiotics from the brain. Appears to play a major role in the multidrug resistance phenotype of several cancer cell lines. Implicated in the efflux of numerous drugs and xenobiotics; mitoxantrone, the photosensitizer pheophorbide, camptothecin, methotrexate, azidothymidine (AZT), and the anthracyclines

daunorubicin and doxorubicin. [UniProt]

Calculated Mw

PTM Glycosylation-deficient ABCG2 is normally expressed and functional. [UniProt]

Cellular Localization Cell membrane; Multi-pass membrane protein. Mitochondrion membrane; Multi-pass membrane

protein. [UniProt]
