# ARG40875 anti-DPYSL2 / CRMP2 antibody

Package: 100 μl Store at: -20°C

## **Summary**

Product Description Rabbit Polyclonal antibody recognizes DPYSL2 / CRMP2

Tested Reactivity Hu, Ms, Rat

Tested Application FACS, ICC/IF, IHC-P, IP, WB

Host Rabbit

**Clonality** Polyclonal

Isotype IgG

Target Name DPYSL2 / CRMP2

Species Human

Immunogen Synthetic peptide derived from Human DPYSL2 / CRMP2.

Conjugation Un-conjugated

Alternate Names Unc-33-like phosphoprotein 2; Dihydropyrimidinase-related protein 2; Collapsin response mediator

protein 2; DRP2; ULIP2; N2A3; DRP-2; DHPRP2; ULIP-2; CRMP-2; CRMP2

## **Application Instructions**

Application table	Application	Dilution
	FACS	1:100
	ICC/IF	1:50 - 1:200
	IHC-P	1:50 - 1:200
	IP	1:50
	WB	1:1000 - 1:5000
Application Note	* The dilutions indicate recommended starting dilutions and the optimal dilutions or concentrations should be determined by the scientist.	

#### **Properties**

Form Liquid

Purification Affinity purified.

Buffer PBS (pH 7.4), 150 mM NaCl, 0.02% Sodium azide and 50% Glycerol.

Preservative 0.02% Sodium azide

Stabilizer 50% Glycerol

Storage instruction For continuous use, store undiluted antibody at 2-8°C for up to a week. For long-term storage, aliquot

and store at -20°C. Storage in frost free freezers is not recommended. Avoid repeated freeze/thaw cycles. Suggest spin the vial prior to opening. The antibody solution should be gently mixed before use.

#### Bioinformation

Gene Symbol DPYSL2

Gene Full Name dihydropyrimidinase-like 2

Background This gene encodes a member of the collapsin response mediator protein family. Collapsin response

mediator proteins form homo- and hetero-tetramers and facilitate neuron guidance, growth and polarity. The encoded protein promotes microtubule assembly and is required for Sema3A-mediated growth cone collapse, and also plays a role in synaptic signaling through interactions with calcium channels. This gene has been implicated in multiple neurological disorders, and hyperphosphorylation of the encoded protein may play a key role in the development of Alzheimer's disease. Alternatively spliced transcript variants encoding multiple isoforms have been observed for this gene. [provided by

RefSeq, Sep 2011]

Function Plays a role in neuronal development and polarity, as well as in axon growth and guidance, neuronal

growth cone collapse and cell migration. Necessary for signaling by class 3 semaphorins and subsequent remodeling of the cytoskeleton. May play a role in endocytosis. [UniProt]

Calculated Mw 62 kDa

PTM 3F4, a monoclonal antibody which strongly stains neurofibrillary tangles in Alzheimer disease brains,

specifically labels DPYSL2 when phosphorylated on Ser-518, Ser-522 and Thr-509.

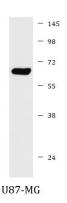

Phosphorylation at Thr-514 by GSK3B abolishes tubulin-binding leading to destabilization of microtubule assembly in axons and neurodegeneration (By similarity). Phosphorylation by DYRK2 at

Ser-522 is required for subsequent phosphorylation by GSK3B. [UniProt]

Cellular Localization Cytoplasm, cytosol. Cytoplasm, cytoskeleton. Membrane. Note=Tightly but non-covalently associated

with membranes. [UniProt]
