| ARG42310 | Package: 50 tests |
| :--- | :--- |
| anti-CD35 / CR1 antibody [E11] (APC) | Store at: $4^{\circ} \mathrm{C}$ |

## Summary

| Product Description | APC-conjugated Mouse Monoclonal antibody [E11] recognizes CD35 / CR1 |
| :--- | :--- |
| Tested Reactivity | Hu, NHuPrm |
| Tested Application | FACS |
| Specificity | The mouse monoclonal antibody E11 recognizes an extracellular epitope of CD35 (CR1), a type I <br> transmembrane glycoprotein expressed on granulocytes, monocytes, B cells, folicular dendritic cells, <br> erythrocytes, NK and T cell subsets, as well as e.g. on glomerulal podocytes. |
| Host | Mouse |
| Clonality | E11 |
| Clone | IgG1 |
| Isotype | CD35 / CR1 |
| Target Name | Human |
| Species | Acute monocytic leukemia cells and normal blood monocytes. |
| Immunogen | APC |
| Conjugation | C3b/C4b receptor; C4BR; CD antigen CD35; KN; CD35; C3BR; Complement receptor type 1 |

## Application Instructions

| Application table | Application | Dilution |
| :--- | :--- | :--- |
| FACS $10 \mu \mathrm{l} / 100 \mu \mathrm{l}$ of whole blood or $10^{\wedge} 6$ cells |  |  |
| Application Note | * The dilutions indicate recommended starting dilutions and the optimal dilutions or concentrations |  |
| should be determined by the scientist. |  |  |

Properties

| Form | Liquid |
| :--- | :--- |
| Purification | Purified |
| Buffer | PBS and 15 mM Sodium azide. |
| Preservative | 15 mM Sodium azide |
| Storage instruction | Aliquot and store in the dark at $2-8^{\circ} \mathrm{C}$. Keep protected from prolonged exposure to light. Avoid <br> repeated freeze/thaw cycles. Suggest spin the vial prior to opening. The antibody solution should be <br> gently mixed before use. |
| Note | For laboratory research only, not for drug, diagnostic or other use. |

| Gene Symbol | CR1 |
| :---: | :---: |
| Gene Full Name | complement component (3b/4b) receptor 1 (Knops blood group) |
| Background | This gene is a member of the receptors of complement activation (RCA) family and is located in the 'cluster RCA' region of chromosome 1. The gene encodes a monomeric single-pass type I membrane glycoprotein found on erythrocytes, leukocytes, glomerular podocytes, and splenic follicular dendritic cells. The Knops blood group system is a system of antigens located on this protein. The protein mediates cellular binding to particles and immune complexes that have activated complement. Decreases in expression of this protein and/or mutations in its gene have been associated with gallbladder carcinomas, mesangiocapillary glomerulonephritis, systemic lupus erythematosus and sarcoidosis. Mutations in this gene have also been associated with a reduction in Plasmodium falciparum rosetting, conferring protection against severe malaria. Alternate allele-specific splice variants, encoding different isoforms, have been characterized. Additional allele specific isoforms, including a secreted form, have been described but have not been fully characterized. [provided by RefSeq, Jul 2008] |
| Function | Membrane immune adherence receptor that plays a critical role in the capture and clearance of complement-opsonized pathogens by erythrocytes and monocytes/macrophages (PubMed:2963069). Mediates the binding by these cells of particles and immune complexes that have activated complement to eliminate them from the circulation (PubMed:2963069). Acts also in the inhibition of spontaneous complement activation by impairing the formation and function of the alternative and classical pathway C3/C5 convertases, and by serving as a cofactor for the cleavage by factor I of C3b to iC3b, C3c and C3d,g, and of C4b to C4c and C4d (PubMed:2972794, PubMed:8175757). Plays also a role in immune regulation by contributing, upon ligand binding, to the generation of regulatory T cells from activated helper T cells (PubMed:25742728). <br> (Microbial infection) Acts as a receptor for Epstein-Barr virus. [UniProt] |
| Calculated Mw | 224 kDa |
| Cellular Localization | Membrane; Single-pass type I membrane protein. [UniProt] |
