ARG42390 anti-CD129 / IL9R antibody [AH9R7]

Package: 100 μg Store at: -20°C

Summary

Product Description Mouse Monoclonal antibody [AH9R7] recognizes CD129 / IL9R

Tested Reactivity Hu

Tested Application ELISA, FACS

Specificity The mouse monoclonal antibody AH9R7 recognizes an extracellular epitope of CD129 / IL-9R alpha, a 57

kDa type I transmembrane glycoprotein expressed at low levels by lymphocytes, blood cell progenitors,

eosinophils, mast cells, epithelial cells, muscle cells and neurons.

Host Mouse

Clonality Monoclonal

Clone

Isotype IgG2b, kappa **Target Name** CD129 / IL9R

Species Human

Immunogen Human CD129-transfected cell line.

AH9R7

Conjugation Un-conjugated

Alternate Names IL-9R; CD antigen CD129; CD129; IL-9 receptor; Interleukin-9 receptor

Application Instructions

Application table	Application	Dilution
	ELISA	Assay-dependent
	FACS	Assay-dependent
Application Note	* The dilutions indicate recommended starting dilutions and the optimal dilutions or concentrations should be determined by the scientist.	

Properties

Form Liquid

Purification Purification with Protein A.

Buffer PBS and 15 mM Sodium azide.

Preservative 15 mM Sodium azide

Concentration 1 mg/ml

Storage instruction For continuous use, store undiluted antibody at 2-8°C for up to a week. For long-term storage, aliquot

> and store at -20°C or below. Storage in frost free freezers is not recommended. Avoid repeated freeze/thaw cycles. Suggest spin the vial prior to opening. The antibody solution should be gently mixed

before use.

Bioinformation

Gene Symbol IL9R

Gene Full Name interleukin 9 receptor

Background The protein encoded by this gene is a cytokine receptor that specifically mediates the biological effects

of interleukin 9 (IL9). The functional IL9 receptor complex requires this protein as well as the interleukin 2 receptor, gamma (IL2RG), a common gamma subunit shared by the receptors of many different cytokines. The ligand binding of this receptor leads to the activation of various JAK kinases and STAT proteins, which connect to different biologic responses. This gene is located at the pseudoautosomal regions of X and Y chromosomes. Genetic studies suggested an association of this gene with the development of asthma. Multiple pseudogenes on chromosome 9, 10, 16, and 18 have been described. Alternatively spliced transcript variants have been found for this gene. [provided by RefSeq, Jul 2008]

Function This is a receptor for interleukin-9. [UniProt]

Calculated Mw 57 kDa

Cell ular Localization Cell membrane; Single-pass type I membrane protein. Secreted. [UniProt]
