ARG43682 anti-MLLT10 / AF10 antibody

Package: 100 μl Store at: -20°C

Summary

Product Description Rabbit Polyclonal antibody recognizes MLLT10 / AF10

Tested Reactivity Hu

Tested Application IHC-P, WB

Specificity This antibody is expected to recognize both reported isoforms (NP_004632.1; NP_001009569.1).

Host Rabbit

Clonality Polyclonal

Isotype IgG

Target Name MLLT10 / AF10

Species Human

Immunogen Synthetic peptide of Human MLLT10 / AF10.

Conjugation Un-conjugated

Alternate Names Protein AF-10; AF10; ALL1-fused gene from chromosome 10 protein; MLLT10 histone lysine

methyltransferase DOT1L cofactor

Application Instructions

Application table	Application	Dilution
	IHC-P	1:50 - 1:100
	WB	1:500 - 1:1000
Application Note	* The dilutions indicate recommended starting dilutions and the optimal dilutions or concentrations should be determined by the scientist.	
Observed Size	130 kDa	

Properties

Form	Liquid
Purification	Affinity purified.
Buffer	50 mM Tris-Glycine (pH 7.4), 150 mM NaCl, 0.01% Sodium azide, 40% Glycerol and 0.05% BSA.
Preservative	0.01% Sodium azide
Stabilizer	40% Glycerol and 0.05% BSA
Concentration	Batch dependent

Storage instruction For continuous use, store undiluted antibody at 2-8°C for up to a week. For long-term storage, aliquot and store at -20°C or below. Storage in frost free freezers is not recommended. Avoid repeated

freeze/thaw cycles. Suggest spin the vial prior to opening. The antibody solution should be gently mixed

before use.

Bioinformation

Gene Symbol MLLT10

Gene Full Name MLLT10 histone lysine methyltransferase DOT1L cofactor

Background This gene encodes a transcription factor and has been identified as a partner gene involved in several

chromosomal rearrangements resulting in various leukemias. Multiple transcript variants encoding

different isoforms have been found for this gene. [provided by RefSeq, Sep 2010]

Function Probably involved in transcriptional regulation. In vitro or as fusion protein with KMT2A/MLL1 has

transactivation activity. Binds to cruciform DNA. In cells, binding to unmodified histone H3 regulates DOT1L functions including histone H3 'Lys-79' dimethylation (H3K79me2) and gene activation

(PubMed:26439302). [UniProt]

Research Area Gene Regulation antibody

Calculated Mw 113 kDa

PTM Isopeptide bond; Phosphoprotein; Ubl conjugation
