### Bioinformation

Gene Symbol	CRBN
Gene Full Name	Cereblon
Background	This gene encodes a protein related to the Lon protease protein family. In rodents and other mammals this gene product is found in the cytoplasm localized with a calcium channel membrane protein, and is thought to play a role in brain development. Mutations in this gene are associated with autosomal recessive nonsyndromic cognitive disability. Multiple transcript variants encoding different isoforms have been found for this gene.
Function	Substrate recognition component of a DCX (DDB1-CUL4-X-box) E3 protein ligase complex that mediates the ubiquitination and subsequent proteasomal degradation of target proteins, such as MEIS2 or ILF2.
Calculated Mw	51 kDa
PTM	Phosphoprotein, Ubl conjugation
Cellular Localization	Cytoplasm, Membrane, Nucleus
