Bioinformation

Gene Symbol	SAP30L
Gene Full Name	SAP30 Like

Background	Enables several functions, including non-sequence-specific DNA binding activity, bending; phosphatidylinositol phosphate binding activity; and zinc ion binding activity. Involved in negative regulation of transcription by RNA polymerase II. Located in fibrillar center and nucleoplasm. Part of histone deacetylase complex.
Function	Functions as transcription repressor, probably via its interaction with histone deacetylase complexes
Calculated Mw	21 kDa
PTM	Acetylation, Disulfide bond, Isopeptide bond, Phosphoprotein, Ubl conjugation
Cellular Localization	Nucleus
