Bioinformation

| | |
|-----------------------|--|
| Gene Symbol | MTF1 |
| Gene Full Name | Metal Regulatory Transcription Factor 1 |
| Background | This gene encodes a transcription factor that induces expression of metallothioneins and other genes involved in metal homeostasis in response to heavy metals such as cadmium, zinc, copper, and silver. The protein is a nucleocytoplasmic shuttling protein that accumulates in the nucleus upon heavy metal exposure and binds to promoters containing a metal-responsive element (MRE). |
| Function | Zinc-dependent transcriptional regulator of cellular adaption to conditions of exposure to heavy metals. |
| Calculated Mw | 81 kDa |
| PTM | Acetylation, Phosphoprotein |
| Cellular Localization | Cytoplasm, Nucleus |
