ARG58247 anti-AADAC antibody

Package: 100 μl Store at: -20°C

Summary

Product Description Rabbit Polyclonal antibody recognizes AADAC

Tested Reactivity Hu, Ms

Tested Application WB

Host Rabbit

Clonality Polyclonal

Isotype IgG

Target Name AADAC
Species Human

Immunogen Recombinant fusion protein corresponding to aa. 170-399 of Human AADAC (NP_001077.2).

Conjugation Un-conjugated

Alternate Names EC 3.1.1.3; CES5A1; Arylacetamide deacetylase; DAC

Application Instructions

Application table	Application	Dilution
	WB	1:500 - 1:2000
Application Note	* The dilutions indicate recommended starting dilutions and the optimal dilutions or concentrations should be determined by the scientist.	
Positive Control	A549	
Observed Size	46 kDa	

Properties

Form Liquid

Purification Affinity purified.

Buffer PBS (pH 7.3), 0.02% Sodium azide and 50% Glycerol.

Preservative 0.02% Sodium azide

Stabilizer 50% Glycerol

Storage instruction For continuous use, store undiluted antibody at 2-8°C for up to a week. For long-term storage, aliquot

and store at -20°C. Storage in frost free freezers is not recommended. Avoid repeated freeze/thaw cycles. Suggest spin the vial prior to opening. The antibody solution should be gently mixed before use.

Note For laboratory research only, not for drug, diagnostic or other use.

Bioinformation

Gene Symbol AADAC

Gene Full Name arylacetamide deacetylase

Background Microsomal arylacetamide deacetylase competes against the activity of cytosolic arylamine N-

acetyltransferase, which catalyzes one of the initial biotransformation pathways for arylamine and

heterocyclic amine carcinogens [provided by RefSeq, Jul 2008]

Function Displays cellular triglyceride lipase activity in liver, increases the levels of intracellular fatty acids

derived from the hydrolysis of newly formed triglyceride stores and plays a role in very low-density lipoprotein assembly. Displays serine esterase activity in liver. Deacetylates a variety of arylacetamide substrates, including xenobiotic compounds and procarcinogens, converting them to the primary

arylamide compounds and increasing their toxicity. [UniProt]

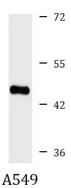

Calculated Mw 46 kDa

PTM Glycosylation is required for enzyme activity. [UniProt]

Cellular Localization Endoplasmic reticulum membrane, Single-pass type II membrane protein, Microsome membrane.

[UniProt]
