## Bioinformation

---

Gene Symbol	ASNS
Gene Full Name	asparagine synthetase (glutamine-hydrolyzing)
Background	The protein encoded by this gene is involved in the synthesis of asparagine. This gene complements a mutation in the temperature-sensitive hamster mutant ts11, which blocks progression through the G1 phase of the cell cycle at nonpermissive temperature. Alternatively spliced transcript variants have been described for this gene. [provided by RefSeq, May 2010]
Calculated Mw	64 kDa
