#### Bioinformation

Gene Symbol CS

Gene Full Name citrate synthase

Background The protein encoded by this gene is a Krebs tricarboxylic acid cycle enzyme that catalyzes the synthesis

of citrate from oxaloacetate and acetyl coenzyme A. The enzyme is found in nearly all cells capable of oxidative metablism. This protein is nuclear encoded and transported into the mitochondrial matrix,

where the mature form is found. [provided by RefSeq, Jul 2008]

Calculated Mw 52 kDa

Cellular Localization Mitochondrion matrix. [UniProt]
