Application Instructions

Application table	Application	Dilution
	WB	0.3 - 1 μg/ml
Application Note	WB: Recommend incubate at RT for 1h. * The dilutions indicate recommended starting dilutions and the optimal dilutions or concentrations should be determined by the scientist.	
Observed Size	~ 55 kDa	

Properties

Form	Liquid
Purification	Affinity purified
Buffer	Tris saline (pH 7.3), 0.02% Sodium azide and 0.5% BSA.
Preservative	0.02% Sodium azide
Stabilizer	0.5% BSA
Concentration	0.5 mg/ml

Storage instruction	For continuous use, store undiluted antibody at 2-8°C for up to a week. For long-term storage, aliquot and store at -20°C or below. Storage in frost free freezers is not recommended. Avoid repeated freeze/thaw cycles. Suggest spin the vial prior to opening. The antibody solution should be gently mixed before use.
Note	For laboratory research only, not for drug, diagnostic or other use.

Bioinformation

Gene Symbol NR5A2	
Gene Full Name nuclea	r receptor subfamily 5, group A, member 2
the fus expres	otein encoded by this gene is a DNA-binding zinc finger transcription factor and is a member of shi tarazu factor-1 subfamily of orphan nuclear receptors. The encoded protein is involved in the sion of genes for hepatitis B virus and cholesterol biosynthesis, and may be an important tor of embryonic development.
bile ac recept metab corepr	Ir receptor that acts as a key metabolic sensor by regulating the expression of genes involved in id synthesis, cholesterol homeostasis and triglyceride synthesis. Together with the oxysterol ors NR1H3/LXR-alpha and NR1H2/LXR-beta, acts as an essential transcriptional regulator of lipid olism. Plays an anti-inflammatory role during the hepatic acute phase response by acting as a essor: inhibits the hepatic acute phase response by preventing dissociation of the N-Cor essor complex.
Calculated Mw 61 kDa	
PTM Isopep	tide bond, Ubl conjugation
Cellular Localization Nucleu	IS
