ARG59184 anti-YES1 antibody

Package: 100 μl Store at: -20°C

## **Summary**

Product Description Rabbit Polyclonal antibody recognizes YES1

Tested Reactivity Hu

Tested Application IHC-P, WB

Host Rabbit

Clonality Polyclonal

Isotype IgG

Target Name YES1

Species Human

Immunogen KLH-conjugated synthetic peptide within aa. 1-30 of Human YES1.

Conjugation Un-conjugated

Alternate Names HsT441; Proto-oncogene c-Yes; Tyrosine-protein kinase Yes; c-yes; Yes; P61-YES; p61-Yes; EC 2.7.10.2

## **Application Instructions**

Application table	Application	Dilution
	IHC-P	1:50 - 1:100
	WB	1:1000
Application Note	* The dilutions indicate recommended starting dilutions and the optimal dilutions or concentrations should be determined by the scientist.	
Positive Control	MDA-MB-468	
Observed Size	~ 65 kDa	

# **Properties**

Form Liquid

Purification Saturated Ammonium Sulfate (SAS) precipitation followed by dialysis against PBS.

Buffer PBS and 0.09% (W/V) Sodium azide.

Preservative 0.09% (W/V) Sodium azide

Storage instruction For continuous use, store undiluted antibody at 2-8°C for up to a week. For long-term storage, aliquot

and store at -20°C or below. Storage in frost free freezers is not recommended. Avoid repeated freeze/thaw cycles. Suggest spin the vial prior to opening. The antibody solution should be gently mixed

before use.

Note For laboratory research only, not for drug, diagnostic or other use.

#### Bioinformation

Gene Symbol YES1

Gene Full Name

YES proto-oncogene 1, Src family tyrosine kinase

Background This gene is the cellular homolog of the Yamaguchi sarcoma virus oncogene. The encoded protein has

tyrosine kinase activity and belongs to the src family of proteins. This gene lies in close proximity to thymidylate synthase gene on chromosome 18, and a corresponding pseudogene has been found on

chromosome 22. [provided by RefSeq, Jul 2008]

Function Non-receptor protein tyrosine kinase that is involved in the regulation of cell growth and survival,

apoptosis, cell-cell adhesion, cytoskeleton remodeling, and differentiation. Stimulation by receptor tyrosine kinases (RTKs) including EGRF, PDGFR, CSF1R and FGFR leads to recruitment of YES1 to the phosphorylated receptor, and activation and phosphorylation of downstream substrates. Upon EGFR activation, promotes the phosphorylation of PARD3 to favor epithelial tight junction assembly. Participates in the phosphorylation of specific junctional components such as CTNND1 by stimulating

the FYN and FER tyrosine kinases at cell-cell contacts. Upon T-cell stimulation by CXCL12, phosphorylates collapsin response mediator protein 2/DPYSL2 and induces T-cell migration.

Participates in CD95L/FASLG signaling pathway and mediates AKT-mediated cell migration. Plays a role in cell cycle progression by phosphorylating the cyclin-dependent kinase 4/CDK4 thus regulating the G1

phase. Also involved in G2/M progression and cytokinesis. [UniProt]

Calculated Mw 61 kDa

PTM Phosphorylation by CSK on the C-terminal tail maintains the enzyme in an inactive state.

Autophosphorylation at Tyr-426 maintains enzyme activity by blocking CSK-mediated inhibition.

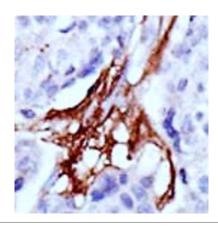

Palmitoylation at Cys-3 promotes membrane localization. [UniProt]

Cellular Localization Cell membrane. Cytoplasm, cytoskeleton, microtubule organizing center, centrosome. Cytoplasm,

cytosol. Note=Newly synthesized protein initially accumulates in the Golgi region and traffics to the

plasma membrane through the exocytic pathway. [UniProt]
