ARG62555 anti-MMP3 antibody [SL-1 ID3]

Package: 100 μl Store at: -20°C

Summary

Product Description Mouse Monoclonal antibody [SL-1 ID3] recognizes MMP3

Tested Reactivity Hu

Tested Application ICC/IF, WB
Host Mouse

Clonality Monoclonal
Clone SL-1 ID3

Isotype IgG1
Target Name MMP3

Species Human

Immunogen APMA (4-Aminophenylmercuric acetate) activated Human stromelysin-1 (SL-1).

Conjugation Un-conjugated

Alternate Names Transin-1; CHDS6; EC 3.4.24.17; SL-1; STMY1; Matrix metalloproteinase-3; STR1; STMY; MMP-3;

Stromelysin-1

Application Instructions

Application table	Application	Dilution
	ICC/IF	Assay-dependent
	WB	1:400
Application Note	* The dilutions indicate recommended starting dilutions and the optimal dilutions or concentrations should be determined by the scientist.	
Positive Control	Conditioned, serum-free medium from TPA treated human Endometrial cells.	

Properties

Form Liquid

Purification Purified Antibody

Buffer 1X PBS and 0.1% Sodium azide

Preservative 0.1% Sodium azide

Concentration 0.2 mg/ml

Storage instruction For continuous use, store undiluted antibody at 2-8°C for up to a week. For long-term storage, aliquot

and store at -20°C or below. Storage in frost free freezers is not recommended. Avoid repeated freeze/thaw cycles. Suggest spin the vial prior to opening. The antibody solution should be gently mixed

before use.

Bioinformation

Database links GeneID: 4314 Human

Swiss-port # P08254 Human

Gene Symbol MMP3

Gene Full Name matrix metallopeptidase 3

Background Proteins of the matrix metalloproteinase (MMP) family are involved in the breakdown of extracellular

matrix in normal physiological processes, such as embryonic development, reproduction, and tissue remodeling, as well as in disease processes, such as arthritis and metastasis. Most MMP's are secreted as inactive proproteins which are activated when cleaved by extracellular proteinases. This gene encodes an enzyme which degrades fibronectin, laminin, collagens III, IV, IX, and X, and cartilage proteoglycans. The enzyme is thought to be involved in wound repair, progression of atherosclerosis, and tumor initiation. The gene is part of a cluster of MMP genes which localize to chromosome

11q22.3. [provided by RefSeq, Jul 2008]

Function Can degrade fibronectin, laminin, gelatins of type I, III, IV, and V; collagens III, IV, X, and IX, and cartilage

proteoglycans. Activates procollagenase. [UniProt]

Research Area Cancer antibody; Cell Biology and Cellular Response antibody; Signaling Transduction antibody

Calculated Mw 54 kDa
