ARG62617 anti-PODXL antibody [PN-15]

Package: 100 μl Store at: -20°C

Summary

Product Description Mouse Monoclonal antibody [PN-15] recognizes PODXL

Tested Reactivity Hu, Rat

Tested Application IHC, IHC-P, WB

Host Mouse

Clonality Monoclonal

Clone PN-15

Isotype IgG1, kappa

Target Name PODXL
Species Human

Immunogen Microsomal fraction of human renal cortical tissue homogenate.

Conjugation Un-conjugated

Alternate Names Gp200; GCTM-2 antigen; PCLP; Podocalyxin; PC; PCLP-1; Podocalyxin-like protein 1

Application Instructions

Application Note WB: 1/100 - 1/2000

IHC: 1/10 - 1/500 IHC-P: 1/10 - 1/500

* The dilutions indicate recommended starting dilutions and the optimal dilutions or concentrations

should be determined by the scientist.

Properties

Form Liquid

Purification Protein G purified

Buffer 10mM PBS (pH 7.4), 0.2% BSA and 0.09% Sodium azide

Preservative 0.09% Sodium azide

Stabilizer 0.2% BSA

Concentration 0.2 mg/ml

Storage instruction For continuous use, store undiluted antibody at 2-8°C for up to a week. For long-term storage, aliquot

and store at -20°C or below. Storage in frost free freezers is not recommended. Avoid repeated

freeze/thaw cycles. Suggest spin the vial prior to opening. The antibody solution should be gently mixed

before use.

Note For laboratory research only, not for drug, diagnostic or other use.

GeneID: 5420 Human

Swiss-port # O00592 Human

Swiss-port # Q9WTQ2 Rat

Gene Symbol PODXL

Gene Full Name podocalyxin-like

Background This gene encodes a member of the sialomucin protein family. The encoded protein was originally

identified as an important component of glomerular podocytes. Podocytes are highly differentiated epithelial cells with interdigitating foot processes covering the outer aspect of the glomerular basement membrane. Other biological activities of the encoded protein include: binding in a membrane protein complex with Na+/H+ exchanger regulatory factor to intracellular cytoskeletal elements, playing a role in hematopoetic cell differentiation, and being expressed in vascular endothelium cells and binding to L-

selectin. [provided by RefSeq, Jul 2008]

Function Involved in the regulation of both adhesion and cell morphology and cancer progression. Function as an

anti-adhesive molecule that maintains an open filtration pathway between neighboring foot processes in the podocyte by charge repulsion. Acts as a pro-adhesive molecule, enhancing the adherence of cells to immobilized ligands, increasing the rate of migration and cell-cell contacts in an integrin-dependent manner. Induces the formation of apical actin-dependent microvilli. Involved in the formation of a preapical plasma membrane subdomain to set up inital epithelial polarization and the apical lumen formation during renal tubulogenesis. Plays a role in cancer development and aggressiveness by inducing cell migration and invasion through its interaction with the actin-binding protein EZR. Affects EZR-dependent signaling events, leading to increased activities of the MAPK and PI3K pathways in

cancer cells. [UniProt]

Research Area Cancer antibody; Cell Biology and Cellular Response antibody; Developmental Biology antibody;

Signaling Transduction antibody

Calculated Mw 59 kDa

PTM N- and O-linked glycosylated. Sialoglycoprotein (By similarity).
