

ARG62768 anti-CD20 antibody [LT20]

Package: 100 μg Store at: -20°C

Summary

Product Description	Mouse Monoclonal antibody [LT20] recognizes CD20
Tested Reactivity	Hu
Tested Application	FACS
Specificity	The clone LT20 reacts with CD20 (Bp35), a 33-37 kDa non-glycosylated membrane receptor with four transmembrane domains, expressed on B lymphocytes (it is lost on plasma cells), follicular dendritic cells, and at low levels on peripheral blood T lymphocytes.
Host	Mouse
Clonality	Monoclonal
Clone	LT20
Isotype	IgG2a
Target Name	CD20
Species	Human
Immunogen	Normal human lymphocytes from lymph node.
Conjugation	Un-conjugated
Alternate Names	Bp35; LEU-16; B-lymphocyte surface antigen B1; B-lymphocyte antigen CD20; CD20; S7; CD antigen CD20; Leukocyte surface antigen Leu-16; B1; CVID5; Membrane-spanning 4-domains subfamily A member 1; MS4A2

Application Instructions

Application table	Application	Dilution
	FACS	3 μg/ml
Application Note	* The dilutions indicate recomm should be determined by the sci	nended starting dilutions and the optimal dilutions or concentrations ientist.

Properties

Liquid
Purified from ascites by precipitation methods and ion exchange chromatography.
> 95% (by SDS-PAGE)
PBS (pH 7.4) and 15 mM Sodium azide
15 mM Sodium azide
1 mg/ml
For continuous use, store undiluted antibody at 2-8°C for up to a week. For long-term storage, aliquot and store at -20°C or below. Storage in frost free freezers is not recommended. Avoid repeated

freeze/thaw cycles. Suggest spin the vial prior to opening. The antibody solution should be gently mixed before use.

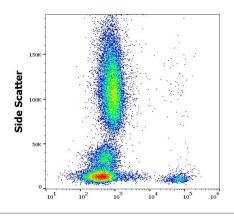

Note

For laboratory research only, not for drug, diagnostic or other use.

Bioinformation

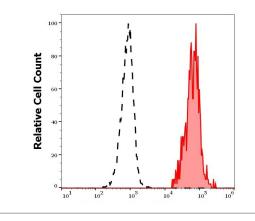

Database links	GenelD: 931 Human
	Swiss-port # P11836 Human
Gene Symbol	MS4A1
Gene Full Name	membrane-spanning 4-domains, subfamily A, member 1
Background	CD20 is a member of the membrane-spanning 4A gene family. Members of this nascent protein family are characterized by common structural features and similar intron/exon splice boundaries and display unique expression patterns among hematopoietic cells and nonlymphoid tissues. This gene encodes a B-lymphocyte surface molecule which plays a role in the development and differentiation of B-cells into plasma cells. This family member is localized to 11q12, among a cluster of family members. Alternative splicing of this gene results in two transcript variants which encode the same protein. [provided by RefSeq, Jul 2008]
Function	CD20 is a B-lymphocyte-specific membrane protein. It plays a role in the regulation of cellular calcium influx necessary for the development, differentiation, and activation of B-lymphocytes (PubMed:3925015, PubMed:7684739, PubMed:12920111). Functions as a store-operated calcium (SOC) channel component promoting calcium influx after activation by the B-cell receptor/BCR (PubMed:7684739, PubMed:12920111, PubMed:18474602). [UniProt]

Research Area	Cancer antibody; Developmental Biology antibody; Immune System antibody; B cell Marker antibody; Immature B Cell Marker antibody; Inflammatory Cell Marker antibody; Tumor-infiltrating Lymphocyte Study antibody
Calculated Mw	33 kDa
РТМ	Phosphorylated. Might be functionally regulated by protein kinase(s).
