ARG63107 anti-TCR alpha + beta antibody [IP26] Package: 100 μg Store at: -20°C

### **Summary**

Isotype

Product Description Mouse Monoclonal antibody [IP26] recognizes TCR alpha + beta

Tested Reactivity Hu

Tested Application CyTOF®-candidate, FACS

Specificity The clone IP26 recognizes a monomorphic determinant of TCR alpha/beta, the dominant subtype of T

cell receptor expressed in human peripheral blood.

Host Mouse

Clonality Monoclonal

Clone IP26

Target Name TCR alpha + beta

lgG1

Conjugation Un-conjugated

## **Application Instructions**

Application table	Application	Dilution
	CyTOF®-candidate	Assay-dependent
	FACS	2 - 4 μg/ml
• •	* The dilutions indicate recommended starting dilutions and the optimal dilutions or concentrations should be determined by the scientist.	
Positive Control	FACS: Human peripheral blood T cells	

### **Properties**

Form Liquid

Purification Purified from ascites by protein-A affinity chromatography.

Purity > 95% (by SDS-PAGE)

Buffer PBS (pH 7.4) and 15 mM Sodium azide

Preservative 15 mM Sodium azide

Concentration 1 mg/ml

Storage instruction For continuous use, store undiluted antibody at 2-8°C for up to a week. For long-term storage, aliquot

and store at -20°C or below. Storage in frost free freezers is not recommended. Avoid repeated freeze/thaw cycles. Suggest spin the vial prior to opening. The antibody solution should be gently mixed

before use.

Note For laboratory research only, not for drug, diagnostic or other use.

#### Bioinformation

Database links GeneID: 6955 Human

Background The antigen-specific T cell receptor (TCR) is composed of either alpha and beta subunit, or gamma and

delta subunit. Majority of T cells present in the blood, lymph and secondary lymphoid organs express TCR alpha/beta heterodimers, whereas the T cells expressing TCR gamma/delta heterodimers are localized mainly in epithelial tissues and at the sites of infection. The subunits of TCR heterodimers are covalently bonded and in the endoplasmic reticulum they associate with CD3 subunits to form functional TCR-CD3 complex. Lack of expression of any of the chains is sufficient to stop cell surface

expression.\_x000D\_
