

## ARG64263 anti-Neurexin 1 antibody

Package: 100 μg Store at: -20°C

# Summary

Reactivity Hu   Reactivity Ms, Rat, Dog   Application FACS, WB   city This antibody is expected to recognise both reported isoforms (NP_004792.1 and NP_620072.1).   Goat Goat   ty Polyclonal   IgG	
Reactivity   Ms, Rat, Dog     Application   FACS, WB     city   This antibody is expected to recognise both reported isoforms (NP_004792.1 and NP_620072.1).     Goat   Polyclonal     ty   IgG	Product Description

Name Neurexin 1	lsotype
	Target Name
Human	Species
ogen C-KEKQPSSAKSSNKN	Immunogen
ation Un-conjugated	Conjugation
te Names Neurexin-1; PTHSL2; Neurexin-1-alpha; Neurexin I-alpha; SCZD17; Hs.22998	Alternate Names

# **Application Instructions**

Application table	Application	Dilution	
	FACS	10 μg/ml	
	WB	0.5 - 1 μg/ml	
Application Note		WB: Recommend incubate at RT for 1h. * The dilutions indicate recommended starting dilutions and the optimal dilutions or concentrations	

should be determined by the scientist.

## Properties

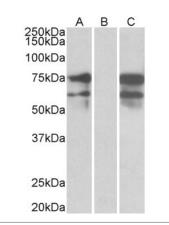

Form	Liquid	
Purification	Purified from goat serum by ammonium sulphate precipitation followed by antigen affinity chromatography using the immunizing peptide.	
Buffer	Tris saline (pH 7.3), 0.02% Sodium azide and 0.5% BSA	
Preservative	0.02% Sodium azide	
Stabilizer	0.5% BSA	
Concentration	0.5 mg/ml	
Storage instruction	For continuous use, store undiluted antibody at 2-8°C for up to a week. For long-term storage, aliquot and store at -20°C or below. Storage in frost free freezers is not recommended. Avoid repeated freeze/thaw cycles. Suggest spin the vial prior to opening. The antibody solution should be gently mixed	

#### For laboratory research only, not for drug, diagnostic or other use.

## **Bioinformation**

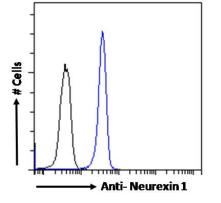

Database links	GeneID: 9378 Human
	Swiss-port # Q9ULB1 Human
Background	Neurexins function in the vertebrate nervous system as cell adhesion molecules and receptors. Two neurexin genes are among the largest known in human (NRXN1 and NRXN3). By using alternate promoters, splice sites and exons, predictions of hundreds or even thousands of distinct mRNAs have been made. Most transcripts use the upstream promoter and encode alpha-neurexin isoforms; fewer transcripts are produced from the downstream promoter and encode beta-neurexin isoforms. Alpha-neurexins contain epidermal growth factor-like (EGF-like) sequences and laminin G domains, and they interact with neurexophilins. Beta-neurexins lack EGF-like sequences and contain fewer laminin G domains than alpha-neurexins. The RefSeq Project has decided to create only a few representative transcript variants of the multitude that are possible. [provided by RefSeq, Oct 2008]
Research Area	Neuroscience antibody; Signaling Transduction antibody
Calculated Mw	162 kDa
PTM	Highly O-glycosylated and minor N-glycosylated.

### Images

### ARG64263 anti-Neurexin 1 antibody WB image

Western blot: 10  $\mu$ g of HEK293 cell lysate (in RIPA buffer) overexpressing Human NRXN1 with DYKDDDDK tag stained with ARG64263 anti-Neurexin 1 antibody at 0.5  $\mu$ g/ml dilution (Lane A); Mock-transfected HEK293 stained with primary antibodies (Lane B); Overexpressing HEK293 cell lysate stained with anti-DYKDDDDK Tag at 1:3000 dilution (Lane C). Primary antibodies were incubated at RT for 1 hour.

#### ARG64263 anti-Neurexin 1 antibody FACS image

Flow Cytometry: Paraformaldehyde-fixed Kelly cells permeabilized with 0.5% Triton. Cells were stained with ARG64263 anti-Neurexin 1 antibody (blue line) at 10  $\mu$ g/ml dilution for 1 hour, followed by incubation with Alexa FluorR 488 labelled secondary antibody. IgG control: Unimmunized goat IgG (black line).
