ARG64722 anti-DPM1 antibody

Package: 100 μg Store at: -20°C

Summary

Product Description Goat Polyclonal antibody recognizes DPM1

Tested Reactivity Rat
Predict Reactivity Ms
Tested Application WB
Host Goat

Clonality Polyclonal

Isotype IgG
Target Name DPM1

Species Mouse

Immunogen PQGRSSRQDKYS-C

Conjugation Un-conjugated

Alternate Names Mannose-P-dolichol synthase subunit 1; Dolichol-phosphate mannosyltransferase subunit 1; Dolichyl-

phosphate beta-D-mannosyltransferase subunit 1; DPM synthase subunit 1; EC 2.4.1.83; MPD synthase

subunit 1; MPDS; CDGIE; Dolichol-phosphate mannose synthase subunit 1 $\,$

Application Instructions

Application table	Application	Dilution
	WB	0.1 - 0.3 μg/ml
Application Note	WB: Recommend incubate at RT for 1h. * The dilutions indicate recommended starting dilutions and the optimal dilutions or concentrations should be determined by the scientist.	

Properties

Form Liquid

Purification Purified from goat serum by ammonium sulphate precipitation followed by antigen affinity

chromatography using the immunizing peptide.

Buffer Tris saline (pH 7.3), 0.02% Sodium azide and 0.5% BSA

Preservative 0.02% Sodium azide

Stabilizer 0.5% BSA

Concentration 0.5 mg/ml

Storage instruction For continuous use, store undiluted antibody at 2-8°C for up to a week. For long-term storage, aliquot

and store at -20°C or below. Storage in frost free freezers is not recommended. Avoid repeated freeze/thaw cycles. Suggest spin the vial prior to opening. The antibody solution should be gently mixed

before use.

Bioinformation

Gene Symbol Dpm1

Gene Full Name dolichol-phosphate (beta-D) mannosyltransferase 1

Background Dolichol-phosphate mannose (Dol-P-Man) serves as a donor of mannosyl residues on the lumenal side

> of the endoplasmic reticulum (ER). Lack of Dol-P-Man results in defective surface expression of GPIanchored proteins. Dol-P-Man is synthesized from GDP-mannose and dolichol-phosphate on the cytosolic side of the ER by the enzyme dolichyl-phosphate mannosyltransferase. Human DPM1 lacks a carboxy-terminal transmembrane domain and signal sequence and is regulated by DPM2. [provided by

RefSeq, Jul 2008]

Function Transfers mannose from GDP-mannose to dolichol monophosphate to form dolichol phosphate

> mannose (Dol-P-Man) which is the mannosyl donor in pathways leading to N-glycosylation, glycosyl phosphatidylinositol membrane anchoring, and O-mannosylation of proteins; catalytic subunit of the

dolichol-phosphate mannose (DPM) synthase complex. [UniProt]
