ARG64940 anti-DBP / Vitamin D binding protein antibody

Package: 100 μg Store at: -20°C

Summary

Product Description Goat Polyclonal antibody recognizes DBP / Vitamin D binding protein

Tested Reactivity Hu

Predict Reactivity Ms, Rat, Dog

Tested Application WB

Host Goat

Clonality Polyclonal

Isotype IgG

Target Name DBP / Vitamin D binding protein

Species Human

Immunogen ERGRDYEKNKVCK; the sequence is corresponding to internal sequence (near the N terminal) amino

acids 18-30 of Human Vitamin D Binding protein (NP_000574.2).

Conjugation Un-conjugated

Alternate Names GRD3; DBP/GC; HEL-S-51; VDBG; VDB; Gc-globulin; DBP; VDBP; Vitamin D-binding protein; Group-

specific component

Application Instructions

Application table	Application	Dilution
	WB	0.5 - 3 μg/ml
Application Note	WB: Recommend incubate at RT for 1h. * The dilutions indicate recommended starting dilutions and the optimal dilutions or concentrations should be determined by the scientist.	

Properties

Form Liquid

Purification Purified from goat serum by ammonium sulphate precipitation followed by antigen affinity

chromatography using the immunizing peptide.

Buffer Tris saline (pH 7.3), 0.02% Sodium azide and 0.5% BSA

Preservative 0.02% Sodium azide

Stabilizer 0.5% BSA

Concentration 0.5 mg/ml

Storage instruction For continuous use, store undiluted antibody at 2-8°C for up to a week. For long-term storage, aliquot

and store at -20°C or below. Storage in frost free freezers is not recommended. Avoid repeated freeze/thaw cycles. Suggest spin the vial prior to opening. The antibody solution should be gently mixed

before use.

Bioinformation

Database links <u>GeneID: 2638 Human</u>

Swiss-port # P02774 Human

Gene Full Name group-specific component (vitamin D binding protein)

Background

The protein encoded by this gene belongs to the albumin gene family. It is a multifunctional protein found in plasma, ascitic fluid, cerebrospinal fluid and on the surface of many cell types. It binds to

vitamin D and its plasma metabolites and transports them to target tissues. Alternatively spliced transcript variants encoding different isoforms have been found for this gene.[provided by RefSeq, Feb

2011]

Research Area Cancer antibody; Metabolism antibody; Signaling Transduction antibody

Calculated Mw 53 kDa

PTM Allele GC*1S is O-glycosylated at Thr-436 (PubMed:20079467). The trisaccharide sugar moiety can be

modified by the successive removal of neuraminic acid and galactose leaving an O-linked N-acetyl-galactosamine. This conversion is thought to produce a macrophage-activating factor (Gc-MAF). Only a minor proportion of plasma GC is O-glycosylated (PubMed:17360250). The potential N-glycosylation

site predicted at Asn-288 is thought to be nonglycosylated.
