ARG65412 anti-CD101 antibody [BB27]

Package: 100 μg Store at: -20°C

Summary

Product Description Mouse Monoclonal antibody [BB27] recognizes CD101

Tested Reactivity Hu

Tested Application CyTOF®-candidate, FACS, IHC-Fr, IP, WB

Specificity The clone BB27 recognizes CD101, a 140 kDa disulfide-bonded homodimeric protein expressed on

activated T cells, and some ther cell types, such as granulocytes and cells of the monocyte/macropgage

lineage.

HLDA V; WS Code T040

Host Mouse

Clonality Monoclonal

Clone BB27
Isotype IgG1

Target Name CD101

Species Human

ImmunogenHuman thymic clone B12

Conjugation Un-conjugated

Alternate Names Immunoglobulin superfamily member 2; IgSF2; CD antigen CD101; Cell surface glycoprotein V7;

EWI-101; IGSF2; V7; Glu-Trp-Ile EWI motif-containing protein 101

Application Instructions

| Application table | Application | Dilution |
|-------------------|--|-----------------|
| | CyTOF®-candidate | Assay-dependent |
| | FACS | 1 - 4 μg/ml |
| | IHC-Fr | Assay-dependent |
| | IP | Assay-dependent |
| | WB | Assay-dependent |
| Application Note | * The dilutions indicate recommended starting dilutions and the optimal dilutions or concentrations should be determined by the scientist. | |

Properties

| Form | Liquid | |
|--------------|---|--|
| Purification | Purified from hybridoma culture supernatant by protein-A affinity chromatography. | |
| Purity | > 95% (by SDS-PAGE) | |

Buffer PBS (pH 7.4) and 15 mM Sodium azide

Preservative 15 mM Sodium azide

Concentration 1 mg/ml

Storage instruction For continuous use, store undiluted antibody at 2-8°C for up to a week. For long-term storage, aliquot

and store at -20°C or below. Storage in frost free freezers is not recommended. Avoid repeated

freeze/thaw cycles. Suggest spin the vial prior to opening. The antibody solution should be gently mixed

before use.

Note For laboratory research only, not for drug, diagnostic or other use.

Bioinformation

Database links GeneID: 9398 Human

Swiss-port # Q93033 Human

Gene Symbol CD101

Gene Full Name CD101 molecule

Background CD101 is a type I transmembrane glycoprotein, which forms disulfide-linked homodimers. It is

expressed on activated T cells, as well as on granulocytes, monocytes, dendritic cells or mucosal T cells. It plays a major role in the activation of T cells by skin dendritic cells. Function of CD101 has not been

fully elucidated, but in mice its knock-out results in liver autoimmune disease induced by

Novosphingobium aromaticivorans.

Function Plays a role as inhibitor of T-cells proliferation induced by CD3. Inhibits expression of IL2RA on activated

T-cells and secretion of IL2. Inhibits tyrosine kinases that are required for IL2 production and cellular proliferation. Inhibits phospholipase C-gamma-1/PLCG1 phosphorylation and subsequent CD3-induced changes in intracellular free calcium. Prevents nuclear translocation of nuclear factor of activated T-cell to the nucleus. Plays a role in the inhibition of T-cell proliferation via IL10 secretion by cutaneous

dendritic cells. May be a marker of CD4(+) CD56(+) leukemic tumor cells. [UniProt]
