Swiss-port # Q9UHY1 Human

Gene Symbol NRBP1

Gene Full Name nuclear receptor binding protein 1

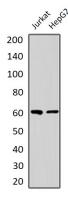

Function May play a role in subcellular trafficking between the endoplasmic reticulum and Golgi apparatus

through interactions with the Rho-type GTPases. Binding to the NS3 protein of dengue virus type 2 appears to subvert this activity into the alteration of the intracellular membrane structure associated

with flaviviral replication. [UniProt]

Calculated Mw 60 kDa
