ARG65993 anti-CCL13 / MCP4 antibody (Biotin)

Package: 50 μg Store at: 4°C

Summary

Product Description Biotin-conjugated Goat Polyclonal antibody recognizes CCL13 / MCP4

Tested Reactivity Hu

Tested Application ELISA, WB

Host Goat

Clonality Polyclonal

Isotype IgG

Target Name CCL13 / MCP4

Species Human

Immunogen E. coli derived recombinant Human CCL13 / MCP4.

(QPDALNVPST CCFTFSSKKI SLQRLKSYVI TTSRCPQKAV IFRTKLGKEI CADPKEKWVQ NYMKHLGRKA HTLKT)

Conjugation Biotin

Alternate Names SCYA13; C-C motif chemokine 13; Monocyte chemotactic protein 4; Small-inducible cytokine A13;

CKb10; SCYL1; Monocyte chemoattractant protein 4; MCP-4; NCC-1; NCC1; CK-beta-10

Application Instructions

Application table	Application	Dilution
	ELISA	Direct: 0.25 - 1.0 μg/ml Sandwich: 0.25 - 1.0 μg/ml with ARG65992 as a capture antibody
	WB	0.1 - 0.2 μg/ml
Application Note	* The dilutions indicate recommended starting dilutions and the optimal dilutions or concentrations should be determined by the scientist.	

Properties

Form Liquid

Purification Purified by affinity chromatography.

Buffer PBS (pH 7.2)

Concentration 1 mg/ml

Storage instruction Aliquot and store in the dark at 2-8°C. Keep protected from prolonged exposure to light. Avoid

repeated freeze/thaw cycles. Suggest spin the vial prior to opening. The antibody solution should be

gently mixed before use.

Note For laboratory research only, not for drug, diagnostic or other use.

Swiss-port # Q99616 Human

Gene Symbol CCL13

Gene Full Name chemokine (C-C motif) ligand 13

Background This antimicrobial gene is one of several Cys-Cys (CC) cytokine genes clustered on the q-arm of

chromosome 17. Cytokines are a family of secreted proteins involved in immunoregulatory and inflammatory processes. The CC cytokines are proteins characterized by two adjacent cysteines. The cytokine encoded by this gene displays chemotactic activity for monocytes, lymphocytes, basophils and eosinophils, but not neutrophils. This chemokine plays a role in accumulation of leukocytes during inflammation. It may also be involved in the recruitment of monocytes into the arterial wall during

artherosclerosis. [provided by RefSeq, Sep 2014]

Function Chemotactic factor that attracts monocytes, lymphocytes, basophils and eosinophils, but not

neutrophils. Signals through CCR2B and CCR3 receptors. Plays a role in the accumulation of leukocytes at both sides of allergic and non-allergic inflammation. May be involved in the recruitment of monocytes into the arterial wall during the disease process of atherosclerosis. May play a role in the

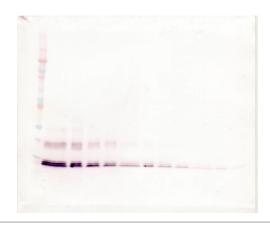

monocyte attraction in tissues chronically exposed to exogenous pathogens. [UniProt]

Calculated Mw 11 kDa

PTM One major form (form long), and two minor forms (short chain and medium chain) are produced by

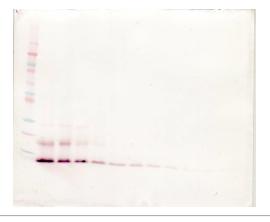

differential signal peptide cleavage. The medium chain is about 30-fold less active than the long chain.
