| ARG66862 | Package: 100 Mg <br> anti-ATR phospho (Ser428) antibody |
| :--- | :--- |
| Store at:-20 ${ }^{\circ} \mathrm{C}$ |  |

## Summary

| Product Description | Rabbit Polyclonal antibody recognizes ATR phospho (Ser428) |
| :--- | :--- |
| Tested Reactivity | Hu |
| Tested Application | IHC-P |
| Specificity | This antibody detects endogenous levels of ATR protein only when phosphorylated at Ser428. |
| Host | Rolyclonal |
| Clonality | IgG |
| Isotype | ATR |
| Target Name | Synthetic peptide around the phosphorylated Ser428 (aa. 394-443) of Human ATR. |
| Species | Un-conjugated |
| Immunogen | FRP1; SCKL; FCTCS; FRAP-related protein 1; Serine/threonine-protein kinase ATR; EC 2.7.11.1; MEC1; |
| Conjugation | SCKL1; Ataxia telangiectasia and Rad3-related protein |
| Alternate Names |  |

Application Instructions

| Application table | Application | Dilution |
| :--- | :--- | :--- |
| IHC-P | $1: 100-1: 300$ |  |
| Application Note | * The dilutions indicate recommended starting dilutions and the optimal dilutions or concentrations <br> should be determined by the scientist. |  |

Properties

| Form | Liquid |
| :--- | :--- |
| Purification | Affinity purification with immunogen. |
| Buffer | PBS, $0.02 \%$ Sodium azide, $50 \%$ Glycerol and $0.5 \% \mathrm{BSA}$. |
| Preservative | $0.02 \%$ Sodium azide |
| Stabilizer | $1 \mathrm{mg} / \mathrm{ml}$ <br> Concentration |
| Ftorage instruction continuous use, store undiluted antibody at $2-8^{\circ} \mathrm{C}$ for up to a week. For long-term storage, aliquot <br> and store at $-20^{\circ} \mathrm{C}$. Storage in frost free freezers is not recommended. Avoid repeated freeze/thaw <br> cycles. Suggest spin the vial prior to opening. The antibody solution should be gently mixed before use. |  |
| Note | For laboratory research only, not for drug, diagnostic or other use. |

| Gene Symbol | ATR |
| :---: | :---: |
| Gene Full Name | ATR serine/threonine kinase |
| Background | The protein encoded by this gene is a serine/threonine kinase and DNA damage sensor, activating cell cycle checkpoint signaling upon DNA stress. The encoded protein can phosphorylate and activate several proteins involved in the inhibition of DNA replication and mitosis, and can promote DNA repair, recombination, and apoptosis. This protein is also important for fragile site stability and centrosome duplication. Defects in this gene are a cause of Seckel syndrome 1. [provided by RefSeq, Aug 2017] |
| Function | Serine/threonine protein kinase which activates checkpoint signaling upon genotoxic stresses such as ionizing radiation (IR), ultraviolet light (UV), or DNA replication stalling, thereby acting as a DNA damage sensor. Recognizes the substrate consensus sequence [ST]-Q. Phosphorylates BRCA1, CHEK1, MCM2, RAD17, RPA2, SMC1 and p53/TP53, which collectively inhibit DNA replication and mitosis and promote DNA repair, recombination and apoptosis. Phosphorylates 'Ser-139' of histone variant H2AX/H2AFX at sites of DNA damage, thereby regulating DNA damage response mechanism. Required for FANCD2 ubiquitination. Critical for maintenance of fragile site stability and efficient regulation of centrosome duplication. [UniProt] |
| Calculated Mw | 301 kDa |
| PTM | Phosphorylated; autophosphorylates in vitro. [UniProt] |
| Cellular Localization | Nucleus. Nucleus, PML body. Chromosome. Note=Depending on the cell type, it can also be found in PML nuclear bodies. Recruited to chromatin during S-phase. Redistributes to discrete nuclear foci upon DNA damage, hypoxia or replication fork stalling. [UniProt] |
