Bioinformation

Gene Symbol	ANAPC15
Gene Full Name	anaphase promoting complex subunit 15
Function	Component of the anaphase promoting complex/cyclosome (APC/C), a cell cycle-regulated E3 ubiquitin ligase that controls progression through mitosis and the G1 phase of the cell cycle. In the complex, plays a role in the release of the mitotic checkpoint complex (MCC) from the APC/C: not required for APC/C activity itself, but promotes the turnover of CDC20 and MCC on the APC/C, thereby participating in the responsiveness of the spindle assembly checkpoint. Also required for degradation of CDC20. [UniProt]
Calculated Mw	14 kDa
Cellular Localization	cytosol; nucleoplasm [UniProt]
