ARG67071 Package: 100 µl anti-SMARCB1 / BAF47 antibody antibody [SQab30346]

Summary

Product Description Recombinant Rabbit Monoclonal antibody [SQab30346] recognizes SMARCB1 / BAF47

Tested Reactivity Hu

Tested Application IHC-P

Host Rabbit

Clonality Monoclonal
Clone SQab30346

Target Name SMARCB1 / BAF47

Species Human

Immunogen Recombinant protein fragment of SMARCB1 / BAF47

Conjugation Un-conjugated

Alternate Names SMARCB1; SWI/SNF Related, Matrix Associated, Actin Dependent Regulator Of Chromatin, Subfamily B,

Member 1; BAF47; PPP1R144; SNF5L1; INI-1; HSNFS; Sfh1p; Snr1; SNF5; RDT; SWI/SNF-Related Matrix-Associated Actin-Dependent Regulator Of Chromatin Subfamily B Member 1; Protein Phosphatase 1, Regulatory Subunit 144; Sucrose Nonfermenting, Yeast, Homolog-Like 1; Malignant Rhabdoid Tumor Suppressor; Integrase Interactor 1 Protein; BRG1-Associated Factor 47; SNF5 Homolog; HSNF5; Ini1; INI1; SWI/SNF-Related Matrix-Associated Protein; Integrase Interactor 1; SWNTS1; MRD15; RTPS1; CSS3

Application Instructions

Application table	Application	Dilution
	IHC-P	1:100-1:200
Application Note	* The dilutions indicate recommended starting dilutions and the optimal dilutions or concentrations should be determined by the scientist.	

Properties

Form Liquid

Purification Purification with Protein A.

Buffer PBS, 0.01% Sodium azide, 40% Glycerol and 0.05% BSA.

Preservative 0.01% Sodium azide

Stabilizer 40% Glycerol and 0.05% BSA

Storage instruction -20°C

Note For continuous use, store undiluted antibody at 2-8°C for up to a week. For long-term storage, aliquot

and store at -20°C. Storage in frost free freezers is not recommended. Avoid repeated freeze/thaw cycles. Suggest spin the vial prior to opening. The antibody solution should be gently mixed before use.

Bioinformation

Gene Symbol

SMARCB1

Gene Full Name

SWI/SNF related, matrix associated, actin dependent regulator of chromatin, subfamily b, member 1

Background

The protein encoded by this gene is part of a complex that relieves repressive chromatin structures, allowing the transcriptional machinery to access its targets more effectively. The encoded nuclear protein may also bind to and enhance the DNA joining activity of HIV-1 integrase. This gene has been found to be a tumor suppressor, and mutations in it have been associated with malignant rhabdoid tumors. Alternatively spliced transcript variants have been found for this gene. [provided by RefSeq, Dec 2015]

Function

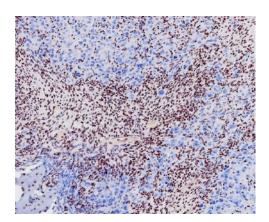

Core component of the BAF (hSWI/SNF) complex. This ATP-dependent chromatin-remodeling complex plays important roles in cell proliferation and differentiation, in cellular antiviral activities and inhibition of tumor formation. The BAF complex is able to create a stable, altered form of chromatin that constrains fewer negative supercoils than normal. This change in supercoiling would be due to the conversion of up to one-half of the nucleosomes on polynucleosomal arrays into asymmetric structures, termed altosomes, each composed of 2 histones octamers. Stimulates in vitro the remodeling activity of SMARCA4/BRG1/BAF190A. Involved in activation of CSF1 promoter. Belongs to the neural progenitors-specific chromatin remodeling complex (npBAF complex) and the neuronspecific chromatin remodeling complex (nBAF complex). During neural development a switch from a stem/progenitor to a postmitotic chromatin remodeling mechanism occurs as neurons exit the cell cycle and become committed to their adult state. The transition from proliferating neural stem/progenitor cells to postmitotic neurons requires a switch in subunit composition of the npBAF and nBAF complexes. As neural progenitors exit mitosis and differentiate into neurons, npBAF complexes which contain ACTL6A/BAF53A and PHF10/BAF45A, are exchanged for homologous alternative ACTL6B/BAF53B and DPF1/BAF45B or DPF3/BAF45C subunits in neuron-specific complexes (nBAF). The npBAF complex is essential for the self-renewal/proliferative capacity of the multipotent neural stem cells. The nBAF complex along with CREST plays a role regulating the activity of genes essential for dendrite growth. [UniProt]

Calculated Mw 44 kDa

PTM Isopeptide bond, Phosphoprotein, Ubl conjugation. [UniProt]

Cellular Localization Nucleus. [UniProt]
