ARG81301 Human Fibronectin ELISA Kit

Package: 96 wells Store at: 4°C

Summary

Product Description ARG81301 Human Fibronectin ELISA Kit is an Enzyme Immunoassay kit for the quantification of Human

Fibronectin in milk, saliva, urine, CSF and cell culture supernatant.

Tested Reactivity Hu

Tested Application ELISA

Target Name Fibronectin

Conjugation HRP

Conjugation Note Substrate: TMB and read at 450 nm.

Sensitivity 3 ng/ml

Sample Type Milk, saliva, urine, CSF and cell culture supernatant.

Standard Range 4 - 1000 ng/ml

Sample Volume $50 \mu l$

Alternate Names ED-B; CIG; GFND; Cold-insoluble globulin; FNZ; LETS; GFND2; Fibronectin; MSF; FINC; FN

Application Instructions

Assay Time ~ 4 hours

Properties

Form 96 well

Storage instruction Store the kit at 2-8°C. Keep microplate wells sealed in a dry bag with desiccants. Do not expose test

reagents to heat, sun or strong light during storage and usage. Please refer to the product user manual

for detail temperatures of the components.

Note For laboratory research only, not for drug, diagnostic or other use.

Bioinformation

Gene Symbol FN1

Gene Full Name fibronectin 1

Background This gene encodes fibronectin, a glycoprotein present in a soluble dimeric form in plasma, and in a

dimeric or multimeric form at the cell surface and in extracellular matrix. Fibronectin is involved in cell adhesion and migration processes including embryogenesis, wound healing, blood coagulation, host defense, and metastasis. The gene has three regions subject to alternative splicing, with the potential to produce 20 different transcript variants. However, the full-length nature of some variants has not

been determined. [provided by RefSeq, Jul 2008]

Function Fibronectins bind cell surfaces and various compounds including collagen, fibrin, heparin, DNA, and

actin. Fibronectins are involved in cell adhesion, cell motility, opsonization, wound healing, and maintenance of cell shape. Involved in osteoblast compaction through the fibronectin fibrillogenesis

www.arigobio.com arigo, nuts about antibodies 1/2

cell-mediated matrix assembly process, essential for osteoblast mineralization. Participates in the regulation of type I collagen deposition by osteoblasts.

Anastellin binds fibronectin and induces fibril formation. This fibronectin polymer, named superfibronectin, exhibits enhanced adhesive properties. Both anastellin and superfibronectin inhibit tumor growth, angiogenesis and metastasis. Anastellin activates p38 MAPK and inhibits lysophospholipid signaling. [UniProt]

PTM Sulfated.

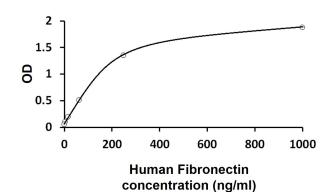

It is not known whether both or only one of Thr-2064 and Thr-2065 are/is glycosylated. Forms covalent cross-links mediated by a transglutaminase, such as F13A or TGM2, between a glutamine and the epsilon-amino group of a lysine residue, forming homopolymers and heteropolymers (e.g. fibrinogen-fibronectin, collagen-fibronectin heteropolymers).

Phosphorylated by FAM20C in the extracellular medium.

Proteolytic processing produces the C-terminal NC1 peptide, anastellin.

Some lysine residues are oxidized to allysine by LOXL3, promoting fibronectin activation and matrix formation.
