# ARG81331 Human CD261 / TRAIL-R1 ELISA Kit

Package: 96 wells Store at: 4°C

#### Summary

Product Description ARG81331 Human CD261 / TRAIL-R1 ELISA Kit is an Enzyme Immunoassay kit for the quantification of

Human CD261 / TRAIL-R1 in serum, plasma and cell culture supernatant.

Tested Reactivity Hu

Tested Application ELISA

Specificity Specific for Human CD261 / TRAIL-R1. No cross reactivity observed with TRAIL, CD117, IL-6R, IL-2R,

CD116, TRAIL R2, TRAIL R3, TRAIL R4, CD178 and Granzyme B.

Target Name CD261 / TRAIL R1

Conjugation HRP

Conjugation Note Substrate: TMB and read at 450 nm.

Sensitivity 8 pg/ml

Sample Type Serum, plasma and cell culture supernatants.

Standard Range 31.25 - 1000 pg/ml

Sample Volume  $100 \ \mu l$ 

Alternate Names TNF-related apoptosis-inducing ligand receptor 1; CD antigen CD261; TRAILR-1; DR4; Tumor necrosis

factor receptor superfamily member 10A; CD261; Death receptor 4; APO2; TRAIL receptor 1; TRAIL-R1;

TRAILR1

### **Application Instructions**

Assay Time ~ 2.5 hours

#### **Properties**

Form 96 well

Storage instruction Store the kit at 2-8°C. Keep microplate wells sealed in a dry bag with desiccants. Do not expose test

reagents to heat, sun or strong light during storage and usage. Please refer to the product user manual

for detail temperatures of the components.

Note For laboratory research only, not for drug, diagnostic or other use.

#### Bioinformation

Gene Symbol TNFRSF10A

Gene Full Name tumor necrosis factor receptor superfamily, member 10a

Background The protein encoded by this gene is a member of the TNF-receptor superfamily. This receptor is

activated by tumor necrosis factor-related apoptosis inducing ligand (TNFSF10/TRAIL), and thus transduces cell death signal and induces cell apoptosis. Studies with FADD-deficient mice suggested that FADD, a death domain containing adaptor protein, is required for the apoptosis mediated by this

protein. [provided by RefSeq, Jul 2008]

Function Receptor for the cytotoxic ligand TNFSF10/TRAIL. The adapter molecule FADD recruits caspase-8 to the

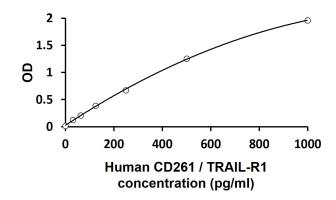

activated receptor. The resulting death-inducing signaling complex (DISC) performs caspase-8 proteolytic activation which initiates the subsequent cascade of caspases (aspartate-specific cysteine

proteases) mediating apoptosis. Promotes the activation of NF-kappa-B. [UniProt]
