ARG81389 Human FABP5 ELISA Kit

Package: 96 wells Store at: 4°C

Summary

Product Description ARG81389 Human FABP5 ELISA Kit is an Enzyme Immunoassay kit for the quantification of Human

FABP5 in serum, plasma and cell culture supernatants.

Tested Reactivity Hu

Tested Application ELISA

Specificity Cross-Reactivity: Not react with FABP1, FABP2, FABP3, FABP4, FABP6, FABP7, FABP8, and FABP9.

Target Name FABP5

Conjugation HRP

Conjugation Note Substrate: TMB and read at 450 nm.

Sensitivity 0.6 ng/ml

Sample Type Serum, plasma and cell culture supernatants.

Standard Range 0.75 - 24 ng/ml

Sample Volume 50 µl

Alternate Names PA-FABP; Epidermal-type fatty acid-binding protein; KFABP; E-FABP; E-FABP; Psoriasis-associated fatty

acid-binding protein homolog; Fatty acid-binding protein, epidermal; Fatty acid-binding protein 5;

PAFABP

Application Instructions

Assay Time ~ 5 hours

Properties

Form 96 well

Storage instruction Store the kit at 2-8°C. Keep microplate wells sealed in a dry bag with desiccants. Do not expose test

reagents to heat, sun or strong light during storage and usage. Please refer to the product user manual

for detail temperatures of the components.

Note For laboratory research only, not for drug, diagnostic or other use.

Bioinformation

Gene Symbol FABP5

Gene Full Name fatty acid binding protein 5 (psoriasis-associated)

Background This gene encodes the fatty acid binding protein found in epidermal cells, and was first identified as

being upregulated in psoriasis tissue. Fatty acid binding proteins are a family of small, highly conserved, cytoplasmic proteins that bind long-chain fatty acids and other hydrophobic ligands. FABPs may play roles in fatty acid uptake, transport, and metabolism. Polymorphisms in this gene are associated with type 2 diabetes. The human genome contains many pseudogenes similar to this locus.[provided by

RefSeq, Feb 2011]

Function High specificity for fatty acids. Highest affinity for C18 chain length. Decreasing the chain length or

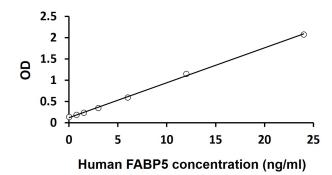

introducing double bonds reduces the affinity. May be involved in keratinocyte differentiation.

[UniProt]
