ARG81642 Mouse CD95 / Fas ELISA Kit

Package: 96 wells Store at: 4°C

Component

Cat. No.	Component Name	Package	Temp
ARG81642-001	Antibody-coated microplate	8 X 12 strips	4°C. Unused strips should be sealed tightly in the air-tight pouch.
ARG81642-002	Standard	2 X 10 ng/vial	4°C
ARG81642-003	Standard/Sample diluent	30 ml (Ready to use)	4°C
ARG81642-004	Antibody conjugate concentrate (100X)	1 vial (100 μl)	4°C
ARG81642-005	Antibody diluent buffer	12 ml (Ready to use)	4°C
ARG81642-006	HRP-Streptavidin concentrate (100X)	1 vial (100 μl)	4°C
ARG81642-007	HRP-Streptavidin diluent buffer	12 ml (Ready to use)	4°C
ARG81642-008	25X Wash buffer	20 ml	4°C
ARG81642-009	TMB substrate	10 ml (Ready to use)	4°C (Protect from light)
ARG81642-010	STOP solution	10 ml (Ready to use)	4°C
ARG81642-011	Plate sealer	4 strips	Room temperature

Summary

Product Description	ARG81642 Mouse CD95 /	Fas ELISA Kit is an Enzyme Immunoas	say kit for the quantification of Mouse

CD95 / Fas in serum, plasma (heparin, EDTA, citrate) and cell culture supernatants.

Tested Reactivity Ms
Tested Application ELISA

Specificity There is no detectable cross-reactivity with other relevant proteins.

Target Name CD95 / Fas

Conjugation HRP

Conjugation Note Substrate: TMB and read at 450 nm.

Sensitivity 15.6 pg/ml

Sample Type Serum, plasma (heparin, EDTA, citrate) and cell culture supernatants.

Standard Range 31.2 - 2000 pg/ml

Sample Volume $100 \ \mu l$

Precision Intra-Assay CV: 6.2%; Inter-Assay CV: 7.3%

Alternate Names CD95; Apoptosis-mediating surface antigen FAS; FAS1; Tumor necrosis factor receptor superfamily

member 6; ALPS1A; APT1; FASTM; CD antigen CD95; APO-1; TNFRSF6; FASLG receptor; Apo-1 antigen

Application Instructions

Assay Time ~ 5 hours

Properties

Form 96 well

Storage instruction Store the kit at 2-8°C. Keep microplate wells sealed in a dry bag with desiccants. Do not expose test

reagents to heat, sun or strong light during storage and usage. Please refer to the product user manual

for detail temperatures of the components.

Note For laboratory research only, not for drug, diagnostic or other use.

Bioinformation

Gene Symbol FAS

Gene Full Name Fas cell surface death receptor

Background The protein encoded by this gene is a member of the TNF-receptor superfamily. This receptor contains

a death domain. It has been shown to play a central role in the physiological regulation of programmed cell death, and has been implicated in the pathogenesis of various malignancies and diseases of the immune system. The interaction of this receptor with its ligand allows the formation of a death-inducing signaling complex that includes Fas-associated death domain protein (FADD), caspase 8, and caspase 10. The autoproteolytic processing of the caspases in the complex triggers a downstream caspase cascade, and leads to apoptosis. This receptor has been also shown to activate NF-kappaB, MAPK3/ERK1, and MAPK8/JNK, and is found to be involved in transducing the proliferating signals in normal diploid fibroblast and T cells. Several alternatively spliced transcript variants have been described, some of which are candidates for nonsense-mediated mRNA decay (NMD). The isoforms lacking the transmembrane domain may negatively regulate the apoptosis mediated by the full length

isoform. [provided by RefSeq, Mar 2011]

Function Receptor for TNFSF6/FASLG. The adapter molecule FADD recruits caspase-8 to the activated receptor.

The resulting death-inducing signaling complex (DISC) performs caspase-8 proteolytic activation which initiates the subsequent cascade of caspases (aspartate-specific cysteine proteases) mediating apoptosis. FAS-mediated apoptosis may have a role in the induction of peripheral tolerance, in the antigen-stimulated suicide of mature T-cells, or both. The secreted isoforms 2 to 6 block apoptosis (in

vitro). [UniProt]
