## Bioinformation

Gene Symbol	SPINT2
Gene Full Name	serine peptidase inhibitor, Kunitz type, 2
Background	This gene encodes a transmembrane protein with two extracellular Kunitz domains that inhibits a variety of serine proteases. The protein inhibits HGF activator which prevents the formation of active hepatocyte growth factor. This gene is a putative tumor suppressor, and mutations in this gene result in congenital sodium diarrhea. Multiple transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Oct 2009]
Function	Inhibitor of HGF activator. Also inhibits plasmin, plasma and tissue kallikrein, and factor XIa. [UniProt]
