Bioinformation

Gene Symbol ANGPTL2

Gene Full Name angiotensin-like 2

Background Angiotensins are members of the vascular endothelial growth factor family and the only known growth factors largely specific for vascular endothelium. Angiotensin-1, angiotensin-2, and angiotensin-4 participate in the formation of blood vessels. ANGPTL2 protein is a secreted glycoprotein with homology to the angiotensins and may exert a function on endothelial cells through autocrine or paracrine action. [provided by RefSeq, Jul 2008]

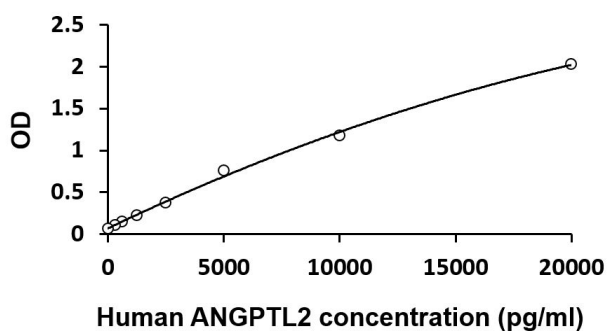

Function Induces sprouting in endothelial cells through an autocrine and paracrine action. [UniProt]
