

ARG83070 Feline Leukemia Virus (FeLV) ELISA Kit

Package: 96 wells

Store at: 4°C

Summary

Product Description	ARG83070 Feline Leukemia Virus (FeLV) ELISA Kit is an enzyme immunoassay kit for the quantification Feline Leukemia Virus in cat serum, plasma, saliva, and bone marrow.
Tested Reactivity	Cat
Tested Application	ELISA
Target Name	Leukemia Virus
Conjugation	HRP
Conjugation Note	Substrate: TMB and read at 450 nm.
Detection Range	Cut-off
Sample Type	Serum, plasma, saliva, and bone marrow.
Sample Volume	100 µl
Alternate Names	Feline Leukemia Virus, FeLV, Feline sarcoma and leukemia virus, Feline sarcoma virus

Application Instructions

Assay Time	~2 hour
------------	---------

Properties

Form	96 well
Storage instruction	Store the kit at 2-8°C. Keep microplate wells sealed in a dry bag with desiccants. Do not expose test reagents to heat, sun or strong light during storage and usage. Please refer to the product user manual for detail temperatures of the components.
Note	For laboratory research only, not for drug, diagnostic or other use.

Bioinformation

Background	Feline leukemia virus (FeLV) is a retrovirus that infects cats. FeLV can be transmitted from infected cats when the transfer of saliva or nasal secretions is involved. If not defeated by the animal's immune system, the virus weakens the cat's immune system, which can lead to diseases which can be lethal. Because FeLV is cat-to-cat contagious, FeLV+ cats should only live with other FeLV+ cats. FeLV is categorized into four subgroups, A, B, C and T. An infected cat has a combination of FeLV-A and one or more of the other subgroups. Symptoms, prognosis and treatment are all affected by subgroup.
