ARG83341 Human PILRA ELISA Kit

Package: 96 wells Store at: 4°C

Summary

Product Description ARG83341 Human PILRA ELISA Kit is an Enzyme Immunoassay kit for the quantification of Human PILRA

in serum, plasma and cell culture supernatants.

Tested Reactivity Hu

Tested Application ELISA

Specificity There is no detectable cross-reactivity with other relevant proteins.

Target Name PILRA

Conjugation HRP

Conjugation Note Substrate: TMB and read at 450 nm.

Sensitivity 75 pg/ml

Detection Range 156 pg/ml - 10000 pg/ml

Sample Type Serum, Plasma and Cell culture supernatants.

Alternate Names PILRA; Paired Immunoglobin Like Type 2 Receptor Alpha; FDF03; Paired Immunoglobulin-Like Type 2

Receptor Alpha; Inhibitory Receptor PILR-Alpha; Cell Surface Receptor FDF03; Paired Immunoglobin-

Like Type 2 Receptor Alpha

Application Instructions

Assay Time ~ 5 hours

Properties

Form 96 well

Storage instruction Store the kit at 2-8°C. Keep microplate wells sealed in a dry bag with desiccants. Do not expose test

reagents to heat, sun or strong light during storage and usage. Please refer to the product user manual

for detail temperatures of the components.

Note For laboratory research only, not for drug, diagnostic or other use.

Bioinformation

Gene Symbol PILRA

Gene Full Name Paired Immunoglobin Like Type 2 Receptor Alpha

Background Cell signaling pathways rely on a dynamic interaction between activating and inhibiting processes.

SHP-1-mediated dephosphorylation of protein tyrosine residues is central to the regulation of several cell signaling pathways. Two types of inhibitory receptor superfamily members are immunoreceptor tyrosine-based inhibitory motif (ITIM)-bearing receptors and their non-ITIM-bearing, activating counterparts. Control of cell signaling via SHP-1 is thought to occur through a balance between PILRalpha-mediated inhibition and PILRbeta-mediated activation. These paired immunoglobulin-like receptor genes are located in a tandem head-to-tail orientation on chromosome 7. This particular gene

www.arigobio.com arigo.nuts about antibodies 1/2

encodes the ITIM-bearing member of the receptor pair, which functions in the inhibitory role. Alternative splicing has been observed at this locus and three variants, each encoding a distinct in force are the price of the pric

isoform, are described.

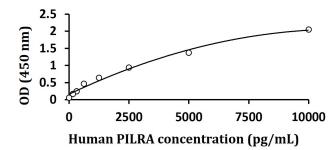

Function Paired receptors consist of highly related activating and inhibitory receptors and are widely involved in

the regulation of the immune system. PILRA is thought to act as a cellular signaling inhibitory receptor by recruiting cytoplasmic phosphatases like PTPN6/SHP-1 and PTPN11/SHP-2 via their SH2 domains that block signal transduction through dephosphorylation of signaling molecules. Receptor for PIANP.

PTM Glycoprotein, Phosphoprotein

Cellular Localization Cell membrane, Membrane, Secreted
